* These figures are approximations calculated by using the whole mobile data quota on newspapers. Some news articles and some interactions will use more or less data which will therefore reduce or increase the number of articles that can be read within the quota.

** This is an approximation based on podcasts using around 0.5Mb/min. Most podcast use around this amount, however, some use more or less than this, therefore you will be able to download more or less than these estimated amounts. The RealSAM service will limit your access to services once you are close to your monthly limit, so that you do not go over your monthly allowance.
